Paper 1: Inorganic and Physical Chemistry

Friday 27 May 2016          Morning       Time allowed: 1 hour 30 minutes

Materials
For this paper you must have:
• the Periodic Table/Data Sheet, provided as an insert (enclosed)
• a ruler with millimetre measurements
• a calculator, which you are expected to use where appropriate.

Instructions
• Use black ink or black ball-point pen.
• Fill in the boxes at the top of this page.
• Answer all questions.
• You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
• All working must be shown.
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• The maximum mark for this paper is 80.
• The Periodic Table/Data Sheet is provided as in insert.

Advice
• You are advised to spend about 65 minutes on Section A and 25 minutes on Section B.
Section A

Answer all questions in this section.

1. This question is about electron configuration.

Give the full electron configuration of an Al atom and of a Cr$^{3+}$ ion.

[2 marks]

Al atom

Cr$^{3+}$ ion

Deduce the formula of the ion that has a charge of 2+ with the same electron configuration as krypton.

[1 mark]

Deduce the formula of the compound that contains 2+ ions and 3− ions that both have the same electron configuration as argon.

[1 mark]
This question is about Period 3 of the Periodic Table.

Deduce which of Na<sup>+</sup> and Mg<sup>2+</sup> is the smaller ion.
Explain your answer.  

<table>
<thead>
<tr>
<th>Smaller ion</th>
<th>Explanation</th>
</tr>
</thead>
</table>

Write an equation to represent the process that occurs when the first ionisation energy for sodium is measured.

\[ \text{Na} \rightarrow \text{Na}^+ + \text{e}^- \]
The first ionisation energies of some Period 3 elements are shown in Figure 1.

Complete Figure 1 by plotting the approximate first ionisation energy values for magnesium and sulfur.

Explain why the first ionisation energy of sulfur is different from that of phosphorus.  

[4 marks]
This question is about a white solid, \( \text{MHCO}_3 \), that dissolves in water and reacts with hydrochloric acid to give a salt.

\[ \text{MHCO}_3 + \text{HCl} \rightarrow \text{MCl} + \text{H}_2\text{O} + \text{CO}_2 \]

A student was asked to design an experiment to determine a value for the \( M_r \) of \( \text{MHCO}_3 \). The student dissolved 1464 mg of \( \text{MHCO}_3 \) in water and made the solution up to 250 cm\(^3\). 25.0 cm\(^3\) samples of the solution were titrated with 0.102 mol dm\(^{-3}\) hydrochloric acid. The results are shown in Table 1.

<table>
<thead>
<tr>
<th></th>
<th>Rough</th>
<th>1</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial burette reading / cm(^3)</td>
<td>0.00</td>
<td>10.00</td>
<td>19.50</td>
<td>29.25</td>
</tr>
<tr>
<td>Final burette reading / cm(^3)</td>
<td>10.00</td>
<td>19.50</td>
<td>29.25</td>
<td>38.90</td>
</tr>
<tr>
<td>Titre / cm(^3)</td>
<td>10.00</td>
<td>9.50</td>
<td>9.75</td>
<td>9.65</td>
</tr>
</tbody>
</table>

03. Calculate the mean titre and use this to determine the amount, in moles, of HCl that reacted with 25.0 cm\(^3\) of the \( \text{MHCO}_3 \) solution.

[3 marks]

03. Calculate the amount, in moles, of \( \text{MHCO}_3 \) in 250 cm\(^3\) of the solution. Then calculate the experimental value for the \( M_r \) of \( \text{MHCO}_3 \). Give your answer to the appropriate number of significant figures.

[3 marks]
The student identified use of the burette as the largest source of uncertainty in the experiment.

Using the same apparatus, suggest how the procedure could be improved to reduce the percentage uncertainty in using the burette.

Justify your suggested improvement. [2 marks]

Suggestion

__________________________________________________________________________

Justification

__________________________________________________________________________

__________________________________________________________________________

Another student is required to make up 250 cm$^3$ of an aqueous solution that contains a known mass of MHCO$_3$. The student is provided with a sample bottle containing the MHCO$_3$.

Describe the method, including apparatus and practical details, that the student should use to prepare the solution. [6 marks]

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

<tr>
<td>Magnesium</td>
<td>923</td>
<td>1383</td>
</tr>
</tbody>
</table>

In terms of structure and bonding explain why the boiling point of bromine is different from that of magnesium. Suggest why magnesium is a liquid over a much greater temperature range compared to bromine.

[5 marks]
Figure 2 represents two glass flasks, P and Q, connected via a tap.

Flask Q (volume = 1.00 x 10³ cm³) is filled with ammonia (NH₃) at 102 kPa and 300 K. The tap is closed and there is a vacuum in flask P. (Gas constant R = 8.31 J K⁻¹ mol⁻¹)

Calculate the mass of ammonia in flask Q.

Give your answer to the appropriate number of significant figures. [3 marks]
When the tap is opened, ammonia passes into flask P. The temperature decreases by 5 °C. The final pressure in both flasks is 75.0 kPa. Calculate the volume, in cm$^3$, of flask P.

[3 marks]
6

06.1 Explain how ions are accelerated, detected and have their abundance determined in a time of flight (TOF) mass spectrometer. [3 marks]

06.2 Calculate the mass, in kg, of a single $^{52}\text{Cr}^+$ ion. Assume that the mass of a $^{52}\text{Cr}^+$ ion is the same as that of a $^{52}\text{Cr}$ atom.

(The Avogadro constant $L = 6.022 \times 10^{23} \text{ mol}^{-1}$) [1 mark]

06.3 In a TOF mass spectrometer the kinetic energy (KE) of a $^{52}\text{Cr}^+$ ion was $1.269 \times 10^{-13} \text{ J}$

Calculate the velocity of the ion using the equation.

$$KE = \frac{1}{2}mv^2$$

($m = \text{mass/kg and } v = \text{velocity/ ms}^{-1}$) [2 marks]
**06.4** Bromine has two isotopes, \(^{79}\text{Br}\) and \(^{81}\text{Br}\), in approximately equal abundance. In a TOF mass spectrometer bromine forms ions with formula [Br_2]^+

Sketch the pattern of peaks you would expect to see in the mass spectrum of a sample of bromine.

[2 marks]

---

**06.5** A sample of xenon has \(A_r = 131.31\). The sample consists of four isotopes. The abundances of three of the isotopes are shown in Table 3. The data for one of the isotopes, \(m\text{Xe}\), is missing.

<table>
<thead>
<tr>
<th>Isotope</th>
<th>(^{129}\text{Xe})</th>
<th>(^{131}\text{Xe})</th>
<th>(^{132}\text{Xe})</th>
<th>(m\text{Xe})</th>
</tr>
</thead>
<tbody>
<tr>
<td>% abundance</td>
<td>28.0</td>
<td>25.0</td>
<td>27.0</td>
<td>To be calculated</td>
</tr>
</tbody>
</table>

Use the data to calculate the abundance of isotope \(m\text{Xe}\) and calculate \(m\), the mass number of \(m\text{Xe}\). Show your working.

[4 marks]
7. Ammonia reacts with aluminium chloride as shown by the equation:

\[ \text{NH}_3 + \text{AlCl}_3 \rightarrow \text{H}_3\text{NAICl}_3 \]

Draw diagrams to illustrate the shapes of \( \text{NH}_3 \) molecules and of \( \text{AlCl}_3 \) molecules.

Include in your diagrams any lone pairs of electrons that influence the shape.

Indicate the values of the bond angles.

[3 marks]
**07. 2** Name the type of bond formed between N and Al in H₃NAICl₃ and explain how this bond is formed.

[2 marks]

<table>
<thead>
<tr>
<th>Type of bond</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>

Turn over for the next question
A student oxidised a solution of hydrochloric acid with a few drops of sodium chlorate(I) solution. The reaction mixture effervesced and turned pale green. The gas formed bleached universal indicator paper.

08. 1 Write a half-equation for the oxidation of chloride ions.

08. 2 Write a half-equation for the reduction of chlorate(I) ions to chlorine in acidic conditions.

08. 3 Write an overall equation for the redox reaction of chlorate(I) ions with hydrochloric acid.

08. 4 A solution of sodium chlorate(I) was added to a colourless solution of potassium iodide. Suggest what is observed. Explain the reaction that leads to this observation.
A student was given a powder made from a mixture of anhydrous barium chloride and anhydrous magnesium chloride. The student dissolved 1.056 g of the powder in water in a conical flask and added an excess of sulfuric acid. A white precipitate formed and was filtered off, washed and dried. The mass of this solid was 0.764 g.

Identify the white precipitate and calculate the percentage, by mass, of magnesium chloride in the powder.

[4 marks]
Section B

Answer all questions in the spaces provided

Only one answer per question is allowed. For each answer completely fill in the circle alongside the appropriate answer.

CORRECT METHOD ✗  WRONG METHODS ✗ ✗ ✗

If you want to change your answer you must cross out your original answer as shown. ✗

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

You may do your working out in the blank spaces around the questions but this will not be marked. Do not use additional sheets for this working.

1 0 Which element is in the d-block of the Periodic Table?

[1 mark]

A Selenium
B Antimony
C Tantalum
D Lead

1 1 Which species contains an element with an oxidation state of +4?

[1 mark]

A NO₂⁺
B ClO₃⁻
C H₂SO₃
D PCl₅
There are 392 mol of pure gold in a bar measuring 10 cm by 10 cm by 40 cm. What is the density of gold in kg dm$^{-3}$?

[A] 193
[B] 19.3
[C] 1.93
[D] 0.193

Ions of two isotopes of iron are

$^{53}$Fe$^{2+}$ $^{56}$Fe$^{2+}$

Which statement is correct?

[A] The ions of both the isotopes have the electronic configuration 1s$^2$2s$^2$2p$^6$3s$^2$3p$^6$4s$^2$3d$^6$
[B] The ions of both the isotopes contain 26 neutrons
[C] $^{53}$Fe$^{2+}$ has fewer protons than $^{56}$Fe$^{2+}$
[D] After acceleration to the same kinetic energy $^{56}$Fe$^{2+}$ will move more slowly than $^{53}$Fe$^{2+}$
The successive ionisation energies for element X are shown in Figure 3.

Which element is X?

A  Nitrogen
B  Phosphorus
C  Aluminium
D  Boron

Which of these decreases down Group 2?

A  First ionisation energy
B  Atomic radius
C  Number of protons
D  Reactivity with water
Refer to the unbalanced equation below when answering questions 16 and 17.

\[ \text{K}_2\text{Cr}_2\text{O}_7 + 3\text{H}_2\text{C}_2\text{O}_4 + \_\text{H}_2\text{SO}_4 \rightarrow \text{Cr}_2(\text{SO}_4)_3 + \_\text{H}_2\text{O} + 6\text{CO}_2 + \text{K}_2\text{SO}_4 \]

16. In the balanced equation the mole ratio for sulfuric acid to water is

A 1 : 4  
B 1 : 2  
C 4 : 7  
D 4 : 9

[1 mark]

17. What is the reducing agent in this reaction?

A \( \text{H}^+ \)  
B \( \text{C}_2\text{O}_4^{2-} \)  
C \( \text{K}^+ \)  
D \( \text{Cr}_2\text{O}_7^{2-} \)

[1 mark]
A pale brown mixture of NO₂ and N₂O₄ is allowed to reach equilibrium in a sealed gas syringe according to the following equation.

\[ 2\text{NO}_2(g) \rightleftharpoons \text{N}_2\text{O}_4(g) \]

When the plunger is pushed further into the syringe the pressure increases and the mixture becomes paler in colour.

When the syringe is placed in a hot oven the mixture becomes darker in colour.

Which of the following statements is correct? [1 mark]

A. NO₂ is brown and the forward reaction is exothermic.
B. NO₂ is brown and the forward reaction is endothermic.
C. NO₂ is colourless and the forward reaction is exothermic.
D. NO₂ is colourless and the forward reaction is endothermic.
Which molecule has the largest dipole?

A  ClF₃
B  BF₃
C  SF₆
D  CF₄

[1 mark]

In a molecule of a hydrocarbon, the fraction by mass of carbon is \( \frac{9}{11} \).

What is the empirical formula of the hydrocarbon?

A  CH
B  CH₃
C  C₃H₈
D  C₅H₁₂

[1 mark]
30 cm³ of xenon are mixed with 20 cm³ of fluorine. The gases react according to the following equation. Assume that the temperature and pressure remain constant.

\[ \text{Xe(g)} + \text{F}_2(\text{g}) \rightarrow \text{XeF}_2(\text{g}) \]

What is the final volume of gas after the reaction is complete? [1 mark]

A 50 cm³  
B 40 cm³  
C 30 cm³  
D 20 cm³

Which of the following solutions would react exactly with a solution containing 0.0500 mol sulfuric acid? [1 mark]

A 50.0 cm³ of 1.00 mol dm⁻³ KOH  
B 100.0 cm³ of 2.00 mol dm⁻³ KOH  
C 100.0 cm³ of 2.00 mol dm⁻³ \( \text{Ba(OH)}_2 \)  
D 50.0 cm³ of 1.00 mol dm⁻³ \( \text{Ba(OH)}_2 \)
In a car airbag, sodium azide (NaN₃) decomposes to form sodium metal and nitrogen gas.

\[ 2\text{NaN}_3(s) \rightarrow 2\text{Na}(s) + 3\text{N}_2(g) \]

The sodium metal then reacts with potassium nitrate to produce more nitrogen gas.

\[ 10\text{Na}(s) + 2\text{KNO}_3(s) \rightarrow \text{N}_2(g) + 5\text{Na}_2\text{O}(s) + \text{K}_2\text{O}(s) \]

If 2.00 mol of sodium azide react in this way, how many molecules of \( \text{N}_2 \) will be formed?

(The Avogadro constant \( L = 6.022 \times 10^{23} \text{ mol}^{-1} \) )

\[1 \text{ mark}\]

A 2.41 \times 10^{24}

B 1.93 \times 10^{24}

C 1.81 \times 10^{24}

D 9.63 \times 10^{23}
